Visual encoding is a unique service offered by Letter 27.

Clear visual descriptions

We combine systems engineering knowledge with visual design to reshape the diagrams you use.

Clear visual descriptions make your documents easier to read and more engaging.

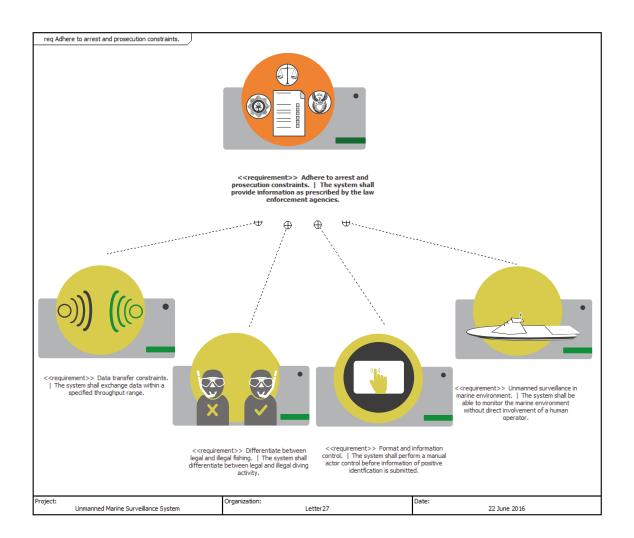

Representing complex ideas

Your documents will gain visual consistency and added descriptive power without adding visual noise.

Our designer has experience working with systems engineers. She understands the importance of the finer details of representing complex ideas.

Effective communication

Engineers develop documents to communicate with stakeholders, clients and the development team. The goal of these documents is clear and effective communication. Whether it be technical systems engineering descriptions, proposals or training materials.

Visual encoding in CORE and GENESYS

This is an exclusive offer to CORE and GENESYS clients. Both CORE and GENESYS have the capability to represent the elements in the model in a visual format. The model gains in communicative power by adding visual elements such as colour coding and unique icons.

Reshape your diagrams

Reshape diagrams used in proposals, specifications, training materials or other documentation. The outcome is unambiguous, unique and visually appealing.
